SANDMASTER

SAND CLEANING

SANDMASTER

CLEAN PLAY AND SPORTS SURFACES. SAFE. EFFICIENT. SUSTAINABLE.

Clean sand is the foundation for safety, hygiene and the long-term value of public play and sports areas.

Using state-of-the-art technology, Sandmaster cleans sand and gravel on playgrounds, sports facilities, daycare centres, beach volleyball courts and leisure grounds — with precision and reliability.

Our TÜV-certified process cleans, sifts and aerates sand and gravel in a single operation. Contaminants such as glass, stones, metal fragments, organic residue and other foreign matter are effectively removed — without the need to replace the material entirely.

The result: hygienically clean, noticeably revitalised sand. Deep aeration reduces microbial load and stabilises the natural microflora. At the same time, we lower costs and conserve valuable resources — sustainably and economically.

As an option, our patented 3D measurement system provides precise documentation of the volumes cleaned and pinpoints exactly where sand should be replenished. The result is a reliable planning basis with maximum transparency.

The effectiveness of our cleaning is scientifically proven.

Expertise that builds trust.

SERVICES & BENEFITS

- Restoration of impact attenuation in accordance with DIN EN 1176 & 1177
- Sustainable and resource-efficient
- Cleaning of areas of all sizes
- Extremely fine sifting of foreign matter
- Decompacts sand
- Hygienic deep cleaning with aeration to a depth of up to 40 cm
- Optional maintenance contracts with cost certainty
- TÜV-certified cleaning process
- Efficiency scientifically proven
